Success Stories - ReallogicWorks

Fortune 10 North American Manufacturer:

- A Fortune 10 North American Manufacturer contracted ReallogicWorks to support the modernization of its data center transformation initiative – “Data Center of the Future.” We initially were to provide a comprehensive communication platform, educating approximately 11,000 IT employees on the software migration process’s details, objectives, and benefits. Our role expanded as we designed and developed a self-provisioning portal that enabled employees to utilize data center resources, which saved more than 2 million hours (about 228 years) in manual work compared to the previously established manual approach. In addition, we supported the development of their API Enterprise strategy to drive the program across the enterprise to fulfill their vision.

\$5 Billion Healthcare Technology Spin-out:

- Through our work with a leading technology provider, we have been standardizing business processes based on the SAP Technology Platform. Several legacy Finance systems require a transition into their new SAP IT Architecture. ReallogicWorks established a Program Management Office (PMO) to coordinate and execute all related tasks to facilitate the transition, which includes the transfer of financial data from the existing legacy tools, the design and documentation of new financial processes, and gap analysis. Where applicable, the specification of supporting tools to facilitate the integration of newly designed processes was also adopted.

Fortune 500 Technology Company:

- Our technology client required a critical business management application system to consolidate existing tools and processes to expedite their bid and sales process while ensuring acceptable metrics were achieved. This system has more than 2000 users across 56 countries. We provided the Technical and Operational Oversight for the system by coordinating software development teams in India, Eastern Europe, UK, and USA.

\$2 Billion Aviation Maintenance Service Provider:

- ReallogicWorks was hired by the largest Maintenance, Repair, and Overhaul provider for aircraft in North America to modernize its legacy IT application software architecture and systems. ReallogicWorks’ unique approach extracts business logic embedded in decade-old, custom software applications while exposing the functionality through APIs to modern user Interfaces aligned with human-centered design principles to better adapt to the end user’s needs.

Success Stories – Serempre

Payjoy - Financial Services StartUp

Involved in a dynamic collaboration with Payjoy, an innovative fintech startup based in San Francisco, for an extensive period of over two years.

- **Key Projects:**

- Core app development
- Identity projects
